

THE NATIONAL INVERTED GAS LIGHT

This cut is just half the actual size of the National Inverted Gas Light

An Inverted Gas Light to be a success must have automatic control of gas.

The National is the only light that controls the supply of gas from the mains Automatically.

The National Automatic Regulator Makes the Inverted Light a Success.

It controls the supply of gas under varying pressure, allowing just enough gas to pass through at all times to fill the mantle, which prevents wasting of gas, over-heating of metal parts, the breaking of globes and mantles; the Automatic Regulator by insuring a uniform supply of gas and perfect combustion prevents the deposit of carbon (soot) on burner tip and in mantle.

The National Automatic Regulator is patented, and cannot be used on other lights.

The National Inverted Mantle is so constructed that no jar or draft of air can break it; does not grow dim with age; lasts twice as long as any other mantle.

Fit out your house, office, store, or factory with National Inverted Gas Lights at once, and save $\frac{1}{2}$ of your lighting bills. They give a steady full light downward of twice the candle power, at $\frac{1}{2}$ the cost of any vertical gas light, and at $\frac{1}{5}$ the cost of electricity.

Be sure you are right by buying a National Inverted Gas Light.

Every National is sold under a positive guarantee to give satisfaction or money refunded.
